

StarLite™ Control at the Speed of Light

Wireless Home Lighting Control

Owners of existing homes can now enjoy the luxury and rewards of home lighting control that had previously only been available with new construction. StarLite™ uses wireless, radio frequency technology and your home's existing electrical wiring to create a state-of-the-art, central lighting control system without the hassle and expense of tearing down walls and rerunning electrical wires. Your professional installer will quickly replace your home's existing light switches with new StarLite dimmers and keypads. Configuration is easy with StarLite's simple voice commands and intelligent system feedback. You will love the versatility and convenience that your Centralite system provides with up to 100 lighting scenes,

512 dimming levels, and 50 timed events using the base station's standard astronomical clock. Centralite's open system architecture allows integration with your security system, motorized blinds, thermostats or other home automation systems, making total home automation a breeze. Lighting control can even save you money by extending bulb life and conserving energy. You'll love the convenience of operating any light from anywhere in your home!

Enrich your life today with the convenience, security and savings provided by central lighting control!

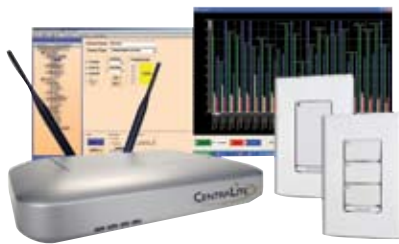

SIMPLE. RELIABLE. AFFORDABLE.

Specifications

SIMPLE INSTALLATION and CONFIGURATION

- Complete training accomplished in hours
- LED Intensity Control for day and nighttime LED settings
- StarLite comes with intuitive configuration software.
- Automatic overload indication. StarLite will detect an overload condition and will display the data in the software.

- Each load control keypad reports the following data to the Master Control Station:
 - Internal temperature
 - Power consumption
 - RF signal strength
 - Light Level
- The Master Control Station compiles the reported data which can be displayed through the configuration software.
- Controller firmware is easily upgraded via downloadable software. No chips to replace.
- StarLite stores its configuration in multiple places.
- System configuration is easily reloaded via USB
- Each dimmer has self-regulating internal temperature control.

MASTER CONTROL STATION

Standard features:

- Ethernet
- USB
- 2 RS232 Ports
- 2.4Ghz Channel Spread Spectrum
- PC Configuration Software
- 4 Contact Inputs
- Astronomical Clock
- DC 92V Power Supply

RF REPEATER

A maximum of four RF Repeater Bands may be added to extend the range of the Master Control Station.

WALL DIMMERS/KEYPADS

- Blue LEDs on each button indicate On/Off
- Available colors:

- One-button 800W* Dimmer controls load connected to the dimmer
- Three-button 800W* Dimmer
